

ORION EX

Conventional Fire Detection & Extinguishing Panel

The ORION EX Conventional Fire Detection and Extinguishing Panel offers a creatively designed and aesthetically pleasing solution to satisfy the growing world demand for dependable Fire Suppression Systems.

The ORION EX is designed and manufactured to comply with **EN 54-2, 54-4 and EN 12094-1**. The **outstanding programmable features** included in this panel are best suited to be installed in expensive housing areas and in general in all areas where loss of equipment can partially or totally disrupt the proper functioning of a business.

Operation is extremely intuitive, offering simple control and one-button disablement facilities, as well as the one man test mode which provides simple and efficient testing of the system.

Advanced configuration solutions include the following: programmable pre-release and extinguishing times, electrovalve and flow switch status indications, manual and abort remote activation. There are 3 normal fire detection zones. All inputs are fully monitored for both Fire, Activation and Fault Conditions.

Plans are under way to further complement this new range of extinguishing devices. Devices such as repeater panels, addressable system interfaces, I/O expansion boards as well as manual/abort call buttons for remote connection are just some of the additions to this range.

ORION EX

Key Features

- ▶ 3 Fire Detection Zones
- ▶ Up to 32 conventional smoke and/or heat detectors per Zone
- ► Active End of Line monitoring
- ▶ Programmable Pre-Release and Extinguishing times
- ▶ Remote Manual Activation and Remote Abort Input
- ▶ Electrovalve and Pressure Switch Status Indication
- One man test
- ▶ Supervised auxiliary 24 volt supply output
- ▶ 2 Supervised/ monitored sounder circuits
- ▶ 2 Remote inputs used for activation of Evacuation and Reset
- ▶ 2 Relay outputs fire and fault with status indication
- ▶ Fully EN 54-2, EN54-4 and EN 12094-1 compliant
